

A FOOD SERVICE SYSTEM FOR SCRAMBLED EGGS.

PRODUCT INFORMATION

PRODUCT DESCRIPTION

Bulk quantities of eggs are packaged by the processor in this specially designed "Egg-In-A-Bag" casing, then frozen and shipped to the distributor or serving facility.

YIELD: One 5 lb. bag (80 ounces) contains approximately 22 two egg servings.

PACKED: Six 5 lb. bags per case, net weight 30 lbs. Cases are 13 1/2" x 17 1/2" x 6" or .82 cu. ft.

The "Egg-In-A-Bag" heavy plastic casing serves as a vehicle for packaging, storing, distributing, cooking and serving.

After cooking the eggs, the casing will retain adequate serving temperature for up to 1 1/2 hours. For serving, the casing is opened and the eggs are scooped directly to the plate. Eggs are cooked to the exact doneness desired. Sealed in the casing there is no drying out or change in texture. They can be chilled, held and reheated in the casing. There are no pots or pans to clean!

Before, during and after cooking, the "Egg-In-A-Bag" Packaging System protects their authentic texture and consistency.

SANITARY

"Egg-In-A-Bag" is a pasteurized and homogenized product. It is processed under direct supervision of the U.S.D.A., and tested salmonella negative prior to shipping.

STORAGE

The frozen product if held at 0 degrees F. or below will keep for up to one year. The fresh liquid product if stored at 38 degrees F. or less should be used within 5 days.

THAWING

Remove from shipping case and hold in refrigerator for two to three days prior to usage. DO NOT THAW AND REFREEZE.
