			Tumble dry	Low heat	
Down Blankets or Down Comforters	3 Full or Queen or 2 King	60	Low to medium heat	120° F - 140°	
		15	Fluff cycle	No heat	

LAUNDRY TIPS

Protection	Washing	Drying	Drying	Drying
 Always use a pillow protector, duvet cover, or feather bed protector to extend the life of the product and the time between washing	 Spot clean when possible, launder when necessary and/or required by brand standards (e.g. Once per quarter on blankets). See “spot cleaning tips” below.	 Do not overfill the machines. Follow the “10 and 2” rule. When you are drying or washing bedding, the products should be falling from either the 10 o'clock position or the 2 o'clock position as you look at the front of the machine. If the products are just spinning in place then there is a good chance that the machine is overfilled!	 Tennis balls added into the dryer can help to speed up the drying process by fluffing the products and moving the fill around	 Be sure that all products are thoroughly dry (both at the corners and in the center of the product) before storing. Incomplete drying can lead to product failure.

SPOT CLEANING TIPS

Protein stains	Tannin Stains	Oil Based Stains	Dye Stains
Baby food, milk, mucus, blood, cheese sauce, mud, cream or pudding, egg, urine, feces, vomit, white glue, ice cream. 1. Remove excess matter first. 2. Apply a detergent or spot remover that contains enzymes (For detergents, use only with cold water. Warm or hot water will set the protein stain). 3. Blot with a white cloth 4. Launder with the enzyme detergent if the stain is stubborn.	Alcohol beverages, berries, Coffee, cologne, felt tip water colored pen or washable ink, fruit juice, soft drinks, tea, tomato juice. 1. Apply a detergent or spot remover that contains enzymes. 2. Do not use soap (bar or flake). Soaps set the stain. 3. Launder the product immediately if possible.	Hair oils, bacon fat, hand and face lotions, butter/margarine, mayonnaise, salad dressing, cooking fats and oils. 1. Apply a detergent or stain spray to the stain and work it in. 2. Blot stain with a white cloth. 3. Suntan products are best removed by pre-treating the stains with a heavy liquid detergent, aerosol petroleum spray, or a pump-type detergent-based pretreatment spray. 4. If the stain persists, wash the product as recommended and repeat.	Cherry and blueberry, felt pens, grass, Kool Aid, mustard and tempera paint. 1. Pre-treat the stain with Ecolab® Stain Blaster. 2. For stubborn stains, soak in a dilution of all-fabric powdered bleach (The drawback to using bleach is that it removes color and weakens threads in the fabric). 2. Launder as needed.
