

Maintenance Information:

Resin chairs can be cleaned with soap and water. Use a milder cleaner like dish soap to clean the furniture.

If you find any stains on your furniture, they can usually be removed with nonabrasive household cleaners like Windex, Fantastik, or 409. If you have more stubborn stains, use a 10% vinegar or bleach solution to remove them.

There are also specialized resin cleaners that might help make your cleaning more efficient. One of the best resin cleaners is SunBrite.

We recommend that you use a chlorine-based disinfectant or an alcohol-based disinfectant on your chairs.

When storing your resin chairs, keep them in a climate-controlled indoor area without exposure to UV rays. Resin can shrink slightly in very cold conditions, so an indoor space with a mild climate is best.
