

Area Rug Care and Cleaning

Ensure the cleanliness and safety of your classroom in three easy steps

Joy Carpets & Co.

When it comes to educational environments, cleaner is always better. Joy Carpets area rugs with WearOn® fiber stay cleaner, safer and more beautiful in even the most active areas. Follow the steps below to ensure the highest level of classroom rug care:

Step 1: VACUUM

To remove dirt and debris, vacuum rug using a commercial upright vacuum with beater brush. Vacuum should make a minimum of three passes in all areas taking care not to avoid serged rug edges.

Step 2: SPOT-CLEAN

Spots and spills can be removed quickly and easily using only soap and water. For stubborn or oily stains, clean these areas with an approved carpet cleaner according to directions. As with any cleaner, spot-test for colorfastness before use.

Step 3: DISINFECT

To reduce risk of exposure to COVID-19 and other harmful viruses and bacteria, apply CDC-approved and readily available 3% Hydrogen Peroxide by spray bottle to entire surface of rug. Allow to dry for 10 minutes and reapply as needed. Hydrogen Peroxide is non-flammable, has the lowest impact on indoor air quality, and is least likely to affect carpet performance with repeated applications over time.
