## WHAT IS GWP?

Global Warming Potential (GWP) is a measurement that is used to compare how different gases impact the Earth's atmosphere. Specifically, it measures how much energy the emissions of a particular gas will absorb over time compared to Carbon Dioxide, which has a standard of 1. The lower the number, the better for the environment.

## OUR MISSION

DAP is committed to reducing our impact on the environment by meeting GWP requirements for our 1 & 2-Component spray foam products – but we didn't stop there. In our constant effort to bring only the best products to market, we pushed the boundaries to deliver on a higher R-value rating, significantly improved our foam quality and completely redesigned our applicator to increase spray speed and ratio performance.
