CARE & MAINTENANCE

Engineered for optimal quality, service, and ease.

Each step is simple: reminders can be programmed and alerts show when attention is required.

DAILY CARE

Powder Path

Run the powder rinse cycle to remove any buildup. You can pre-program rinse cycles in the Menu Mode under Maintenance.

Pod Bin

When the pod bin is full, remove and dispose of used pods to keep the area clean.

Coffee Maker Exterior

Keep your coffee maker looking its best by cleaning the exterior (e.g. drip tray, mug platform, exterior panels) with a damp, soapy, lint-free, nonabrasive cloth.

WEEKLY CARE

Pod Holder Assembly

Detach and rinse clean with a damp, soapy, lint-free, nonabrasive cloth.

Brewing System

Run the brewer rinse cycle to remove any buildup. You can pre-program rinse cycles in the Menu Mode under Maintenance.

Sanitize

Use the Keurig® K-Cup® Pod Deep Cleaning kit to deep clean and sanitize.

Powder Hopper

Use the color-coded Powder Care Kit that arrives with every K-4500™ Café System – it will make this step very simple and minimize brewer downtime. Use the extra set of the following provided parts while you clean: powder hoppers, mixing bowls, milk dispense tubes, milk manifold panel, and exhaust tray.

QUARTERLY CARE

Brew Path and Tank

Descaling can be conducted before and after an extended time in storage to maximize the cleaning effectiveness.

KEURIG® PREMIUM CAFÉ POWDERS

The first step in brewing delicious lattes, cappuccinos, and more

K-4500™ beverages are carefully crafted with an optimal ratio of milk to coffee, delivering a full range of delicious specialty beverages, including traditional and flavored drinks.

The K-4500™ has two (2) powder hoppers: one 3 lb for milk powder and one 2 lb hopper for either chocolate or vanilla powder (not both).

We recommend Keurig® branded powders, but the K-4500™ Café System is compatible with other powder brands.

KEURIG® PREMIUM CAFÉ POWDERS SPECIFICATIONS

KEURIG® PREMIUM CAFÉ MILK POWDER

FAQ

What is the new K-4500™ Café System?

Imagine endless possibilities with the K-4500™ Café System, the latest innovation from Keurig, featuring BrewID™, MultiStream™ Technology, enhanced customization settings, intuitive, interactive design, and connected convenience. The K-4500™ is also engineered for optimal service, quality, and ease for back-to-back brewing, bringing coffeehouse variety to your busy workplace.

Your customers will enjoy delicious specialty beverages like lattes and cappuccinos, as well as an unmatched range of coffee, cocoa, and tea beverages—all at the touch of a screen.

Does the K-4500™ Café System use real espresso?

The K-4500™ Café System brews traditional coffee (vs. espresso) in very concentrated doses to achieve the richness in flavor that consumers associate with espresso-based beverages. For an even more robust taste, we recommend using one of our dark roast or espresso-style K-Cup® Pods.

What's the difference between a cappuccino and a latte?

Cappuccinos are $\frac{1}{3}$ milk froth, $\frac{1}{3}$ steamed milk, and $\frac{1}{3}$ espresso (or in our case, concentrated coffee), which results in a more pronounced coffee flavor than a latte. Cappuccinos are often identified by their rich foamy tops. To achieve this in the K-4500™ Café System, the milk is brewed first and then the coffee is brewed into it. Cappuccino lovers tend to favor dark roasts for the best rich coffee flavor.

Lattes are $\frac{2}{3}$ steamed milk and $\frac{1}{3}$ espresso (or in our case, concentrated coffee) with a bit of foam on top. They have a more milky flavor and are preferred by those who enjoy lighter roasts and/or flavored coffees like French Vanilla or Pumpkin Spice.

Why are there two powder hoppers?

The larger 3 lb powder hopper is for milk powder, and the smaller 2 lb powder hopper is for flavored chocolate or vanilla powder (not both). Two powder hoppers allows for a larger beverage variety.

FAQ

Do you sell your own powders?

Yes. We recommend using our Keurig® Premium Café Milk Powder to deliver a full range of delicious specialty beverages, including traditional and flavored drinks. Each of our powders are sold by the case (twelve 1 lb bags/case) and will make approximately 300 specialty beverages. While we recommend our Keurig® powders for an optimal experience, the K-4500™ is compatible with other milk powders as well.

What's included in the Powder Care Kit?

The interior of the K-4500™ Café System and the associated Powder Care Kit are color-coded to make cleaning easier. Every Powder Care Kit includes the following extra components so you do not lose any brewer time while cleaning:

- Powder Hoppers
- Whipper Components
- Mixer Plate
- Dust Tray
- Milk Tubes

Can I adjust the strength or temperature of my beverage?

Fine tune your cup even more to your liking with an expanded range of strength, temperature, and cup sizes. This includes three strength settings (Regular, Strong, Extra Strong), three temperature settings (Hot, Hotter, Extra Hot), five cup sizes for non-specialty beverages (4, 6, 8, 10, and 12 oz) and three cup sizes for specialty beverages (8, 10, and 12 oz).

How does MultiStream™ brewing technology work?

This technology features five entrance needles instead of one to saturate the grounds more evenly throughout the pod and extract more of the rich flavor and aroma* consumers love. This technology will be used by default on every brew and cannot be turned off.

*vs. Keurig® leading K-Classice® brewer

FAQ

How do I get the recommended brew settings on my K-4500™ Café System?

When brewing a specialty beverage, BrewID™ technology will automatically recognize the pod and provide the recommended settings. Once the pod is recognized, just choose your size and press the "K" to brew.

What are the daily and weekly cleaning requirements?

Does the K-4500™ Café System have an NSF-4 rating?

Yes. This coffee maker is certified by the National Sanitation Foundation (NSF) for use in foodservice outlets.

How many K-Cup® pods can the pod bin hold?

The pod bin can hold up to 35 K-Cup® pods before the machine will alert the user that they need to be recycled. Users also have the option to remove the bin and dispense K-Cup® pods directly into a K-Cycle™ bin underneath the brewer.

Can you recycle K-Cup® pods?

Yes. Our recyclable K-Cup® pod was developed to make recycling simple, recovery easy, and reuse possible. We worked with engineers, end-market reclaimers, manufacturers, and other industry experts to assess what material would be both recyclable and recycled. We also conducted over a dozen full-scale tests at recycling facilities around the country in order to ensure that every K-Cup® pod that's recycled is successfully recovered.

Our K-Cycle™ program composts and recycles your office's K-Cup® pods for you. 75% of a K-Cup® pod by weight is composted and the remaining 25% is recycled, ensuring zero waste enters landfills.

FAQ

Does the K-4500™ offer a hot cocoa option?

The K-4500™ can brew hot cocoa via a Swiss Miss® or Café Escapes K-Cup® pod. The brewer cannot make hot cocoa via the milk powder hoppers.

Can you customize the display screen with other multimedia?

What is the temperature of hot, hotter, and hottest?

Hot = 187 degrees; Hotter = 194 degrees; Hottest = 201 degrees.

How many hoppers does the K-4500™ have?

Powder Type	Hopper 1 lb	Servings*
Milk Powder	3 lb	100
Flavor Powder	2 lb	60

*1 lb of powder = ~30 servings

What is the shelf life of the Keurig® branded powders?

10 months – please note that powders should be stored in a cool dry area.
