

MFG Tray food service products are molded from high-strength, glass-reinforced composites. The fiber component provides strength and dimensional stability. The outstanding physical properties for which these products are known are a result of the synergy of resin matrix and glass reinforcement. Most MFG Tray products are compression molded from our own sheet-molding compound (SMC),

a process that is ideal for producing medium to high volumes of high-strength, complex parts.

Unlike plastic trays and containers, composite products are dimensionally stable and will not bend or sag under heavy loads. And unlike wood and metal, they will not warp, corrode or bend. Thanks to their strength, composite products may be readily stacked to save space and streamline

handling and product storage. The durability that results from composites construction ensures years of dependable performance.

Many MFG trays and containers are safe for food service and are listed with NSF under the NSF/ Ansi 2-Food Service Equipment. The smooth, nonporous surface of composite products resists odors and mildew and is not harmed by detergents.

STRENGTH AT THE CORE. Fibers in MFG Tray products are multidirectional or random for optimal tensile and torsion strength of the finished part. Fiber lengths vary from 1" to 2". The composites can contain up to 35 percent of randomly oriented fibers by weight.

## **EXCEPTIONAL STRENGTH AND STABILITY**

Thanks to their composite design, MFG Tray food service products offer inherent strength and weight-carrying capacity resulting in exceptional stacking capability under heavy loads. They can handle and safely accommodate items to be frozen, refrigerated or prepped without additional handling. They may be cleaned in conventional, high-temperature and chemical dishwashers or steam cleaned.

## **VARIETY OF SIZES** AND CONFIGURATIONS

MFG Tray's high-strength, glass-reinforced composite containers, trays, boxes, flats, and totes proudly serve the food service industry. as well as the material handling (metalworking, plastics, and electronics assembly), confectionery, farming and pharmaceutical industries. The company continually develops customized solutions for specific material-handling challenges and applications. Customers are encouraged to contact MFG Tray to discuss any unique handling and design requirements.

## **HOW TO CARE FOR FIBERGLASS**

Protect your investment with these simple tips. Trays should be washed before use and should be dry prior to storing/stacking. For additional information on cleaning and care of MFG fiberglass trays and containers, visit us online at www.mfgtray.com.

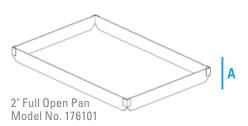

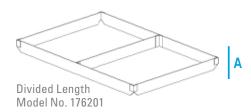

**OPTIMAL PERFORMANCE AND VALUE. MFG Tray food** service products are expressly designed for the unique handling, conveying and storing requirements of food service. They easily integrate into the working environment.

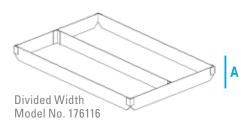

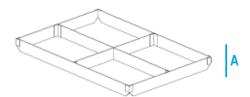

**EASILY CUSTOMIZED.** Select from a wide variety of readily available configurations or customize your own.

Divided Length and Width Model No. 176111

## **PAN EXTENDERS**

- » Accommodates standard baking temperatures
- » Innovative design yields straight sides and insulates product edges
- » Minimizes over-baking and eliminates trimming losses
- » Promotes uniform height, color and texture over the entire surface
- » Results in smooth edges for easier icing
- » May be used for baking sheet cakes, brownies, corn bread, sweet rolls and related items
- » Custom configurations are available
- » Easily cleaned in any standard or commercial high-temp washer
