

Protect your investment with a **ScaleBlocker®** water filtration system

The purchase of steam and combi equipment is an important investment, and we're committed to helping you protect your investment. That's why we recommend using our high-quality ScaleBlocker® Water Filtration System to prevent common steam equipment problems.

ScaleBlocker® is the Best Protection for Your Steam Equipment

ScaleBlocker® is the safest, most economical and efficient way to keep your system as clean as new. ScaleBlocker's innovative media breaks down calcium and magnesium (that could become scale) into nano-crystals that are flushed from the system on a continuous basis. When you replace the filter cartridge every 6 months, use ScaleBlocker® Release™ (included with each filter replacement cartridge) to remove any residual nano-crystals.

SAFE—No additives or chemical inhibitors; meets NSF standards 42 and 53.

SIMPLE—Easy to install; no tools necessary for preventative maintenance.

ENVIRONMENTALLY FRIENDLY—100% recyclable.

ECONOMICAL—One cartridge lasts 6 months; eliminates multi-cartridge expenses.

Water Hardness	Up to 348 ppm, 20 grains/gal.
Small steamers, up to 5 pans	 SMF600
Large steamers, 6 pans or more	 SMF620

Free Reminder Service

We want to take some of the pressure off making your ScaleBlocker® system operate at peak performance. That's why we're offering a free reminder service every 6 months that lets you know it's time to delime your system and change the cartridge. Our exclusive replacement kit includes instructions, water test strip, ScaleBlocker® Release™ and a 6-month replacement cartridge. You'll need to follow a few easy steps to check your water quality and replace your cartridge, and then it's full steam ahead!

ScaleBlocker® SMF Series

State-of-the-art SMF filters provide 40 times the sediment removal capacity, and 30 times the chloramine reduction than conventional carbon block and polypropylene filters. These capacities are based on extensive field-testing in very challenging water conditions.

The SMF sanitary quick-change cartridge is designed so hands and contaminants never touch the filter. Replacing an SMF filter is quicker, and because no tools are necessary, it's easier. Plus, the SMF modular design allows you to increase or decrease the filter capacity as needed.

Recycle Please

Environmental protection is a priority and goes into the design, production and distribution of our products. Every part of our products and packaging is recyclable, and it is our sincere desire that the end-users of our products will recycle responsibly.
