ASSEMBLY, CLEANING AND STORAGE

Process for professional squeegee cleaning!

Follow these processes to have an optimal cleaning result.

1 - ASSEMBLY

- Open the locking collar
- Completely insert handle.
- Hand tighten locking collar.
- Snap in color coding chip of choice.

2 - FLOOR CLEANING

- Best cleaning performance achieved by pulling squeegee
- Optimal working angle is 60° between rubber blade and floor
- Always pull sideways to keep proper angle

3 - MAINTENANCE

QUICK CLEAN

- Flush socket with handle in place.

THOROUGH CLEAN

- Remove handle from the socket.
- Flush the squeegee with water or run through a dish-washer (last run).
- Make sure that all residues are removed from socket and allow to air dry.

4 - STORAGE

- Pay attention that tools are stored in clean and dry conditions.
- Hang squeegee on the wall using Unger HangUp or HoldUp tool holders.
- Touching the floor can cause bacteria build up.
- Keep the tools in a separate storage room.

SmartFit Chip Coding - the most flexible solution!

Each SmartFit squeegee can be assigned to one of four cleaning zones with color chips that snap in place. One purchase for any cleaning zone. Color coding also helps organize tools by area and increases productivity.

HYGIENIC: Clear definition of cleaning zone, prevents cross contamination of bacteria from area to area.

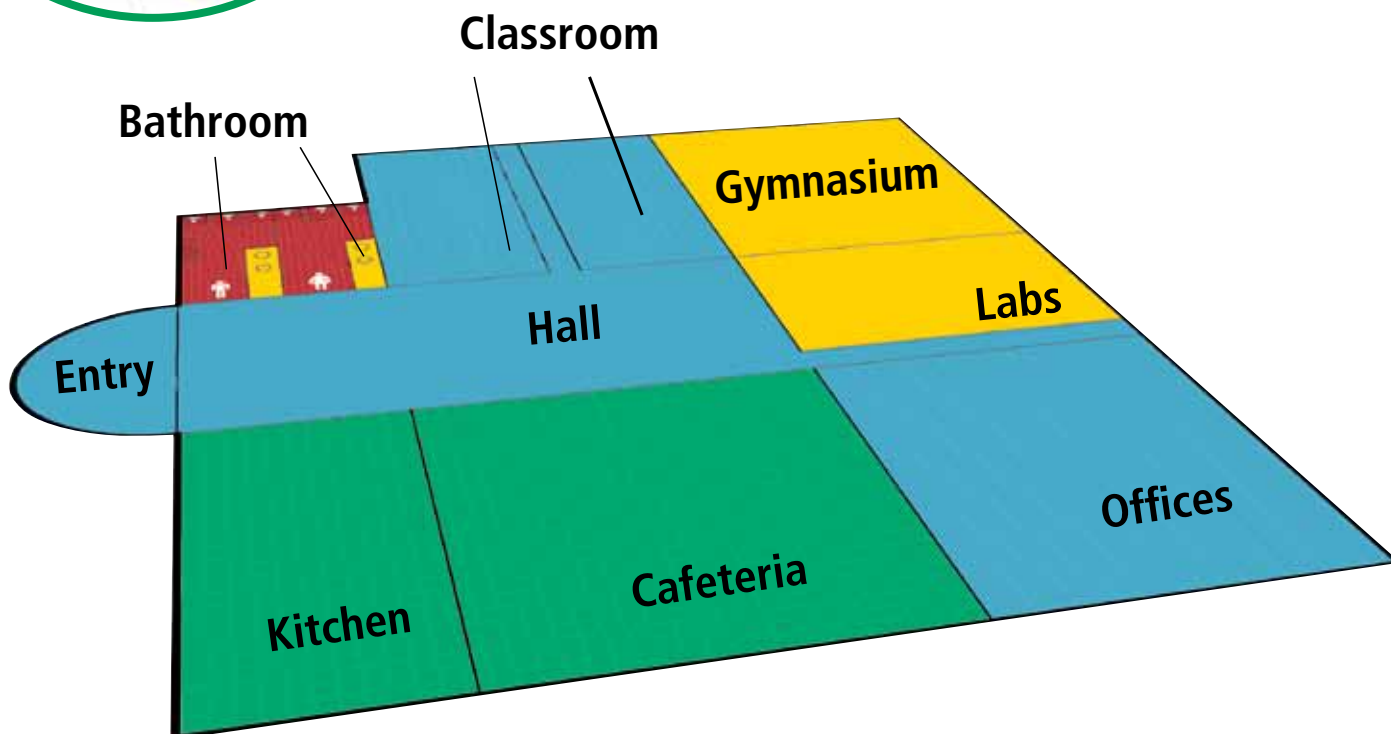

SIMPLE: One tool, four coding options, many usage areas. Less products in storage room.

ORGANIZATION: Visual coding with the Zone system helps employees intuitively identify where to use and store tools.

FLEXIBLE COLOR CODING

- Prevents cross contamination
- Clear assignment of cleaning areas
- Four color chips with every squeegee
- Smart inventory control

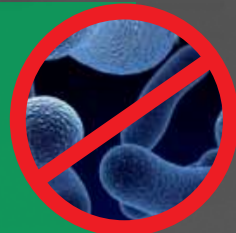

ING

NO CROSS-CONTAMINATION!

- Always clean from lower risk area towards higher areas. (e.g. first salad, then chicken cleaning areas)
- Always clean all tools and wash hands thoroughly after completion of cleaning operation.

CONFORM TO HACCP PRINCIPLES

- Cleaning is a hazard in HACCP systems.
- SmartFit™ tools reduce hazards by using a color coding system and high quality materials.

INTELLIGENT CHIP-SYSTEM FOR LESS STOCK!

- No need to purchase products in all colors.
- Designate colors for different areas in your building.

High Quality Closed Cell Foam Rubber Oil and Acid resistant Neoprene

SmartFit squeegee rubber materials are extremely robust and long-lasting, deliver extraordinary cleaning results and have hygienic advantages over other squeegees. Oil- and Acid-resistant Neoprene is ideal for usage in industrial environments including factories and garages.

HYGIENIC: Closed-Cell Material prevent bacteria from penetrating the rubber, and thus avoid hygienic problems and contamination during the cleaning process.

EFFECTIVE: The double-lip rubber easily gets into the joints between tiles and safely cleans and dries large smooth areas well.

ROBUST: Strong and flexible material guarantees long usage without frequent replacement.

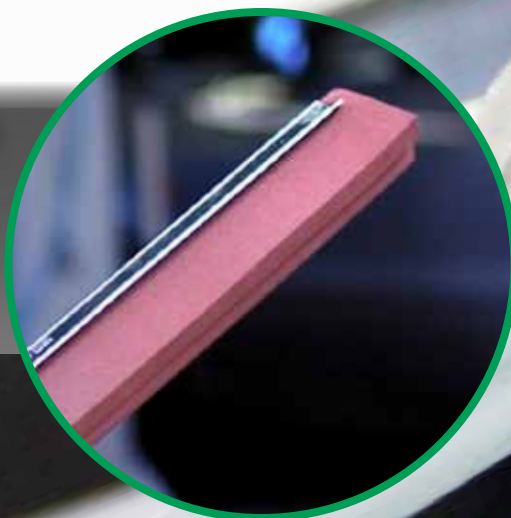

CLOSED CELL FOAM RUBBER

- Leftover moisture in cleaning equipment is a hazard.
- Use only closed cell foam rubber for hygienic cleaning.
- No absorption of moisture.
- No bacteria build up.

RED, OIL RESISTANT RUBBER

- Oil and acid resistant red neoprene.
- Use in areas like garages, factories, where oil covers the floor.
