

Ultra Safe Technology

Tank Brush

Raising the standard for
security, safety, hygiene, and efficacy

A revolutionary design delivering unmatched benefits

Discover the new Ultra Safe Technology Tank Brush

Vikan's years-long innovation efforts resulted in a tank brush that doesn't just meet expectations—it redefines them. The UST Tank Brush sets new standards for hygiene in sensitive environments.

The UST Tank Brush provides unmatched bristle security combined with an exceptionally hygienic, easy-to-clean design, solving a challenge many thought insurmountable.

Security

Exceptional bristle retention: Individually molded bristles minimize bristle loss and reduce the risk of foreign body contamination. Unlike traditional drilled and stapled brushes, losing one bristle doesn't compromise the security of the others.

Optimized brush lifespan: Brushes last longer because of durable construction, top-of-the-line materials, and individually molded bristle security units.

Hygiene

Hygienic design: The fully molded construction minimizes nooks and crannies where contamination can hide, optimizing hygiene by reducing potential harborage points.

Color-coded versatility: Compatible with all Vikan handles and available in 8 colors, the tank brush supports effective color-coded zoning plans.

With our latest addition to the UST range, Vikan continues to set the benchmark for secure, safe, hygienic, and efficient cleaning in the food and beverage industry. Engineered with patented Ultra Safe Technology, our tools deliver unmatched performance and reliability to ensure your cleaning processes are safer and easier than ever before.

Safety

Food contact compliant: Made from EU and FDA food contact compliant materials, the tank brush has been tested and proven to meet the highest food safety standards.

Extensive documentation: All UST and Vikan Hygiene range tools come with complete documentation of compliance, making regulatory and governmental body conformity clearer.

Efficacy

Lightweight and ergonomic: Designed for ease of use, the lightweight construction reduces operator strain during extended tasks.

Cleaning performance: The flared bristle pattern and a rounded head shape effectively clean the rounded edges of tanks and vessels, while stiff bristles tackle heavy soils with ease.

ULTRA SAFE TECHNOLOGY is part of Vikan's ambition to create the most secure, safe, and hygienic cleaning tools for the food and beverage industry. Rigorous testing has proved great functionality, durability, and chemical and thermal resistance. Our award-winning and patented designs provide these benefits across the full UST range:

- Easy to clean, dry, and visually inspect, reducing the risk of tools becoming sources and vectors of contamination.
- Smooth surface finishes with no acute internal angles, metal staples, or resin minimize harborage points for allergens and microorganisms.
- Fully molded bristle security units lower the risk of foreign-body contamination.
- Constructed from EU and FDA food contact compliant materials that are fully tested and documented.
- Unique bristle patterns provide high cleaning efficacy and efficiency.
- Strong, durable, light, and ergonomic construction improves brush life and reduces user fatigue.
