## Stainless Steel Types

Regency work tables come in two different stainless steel types:

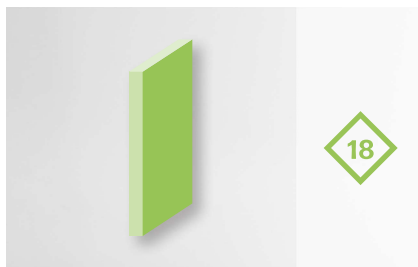

**Type 304** is one of the most common and preferred types of stainless steel used for commercial work tables due to its high resistance to corrosion and rust. This type of stainless steel contains nickel, making it more durable.

**Type 430** stainless steel contains chromium and iron, making it less resistant to corrosion than type 304 stainless steel, yet still ideal for environments with mild corrosion susceptibility.

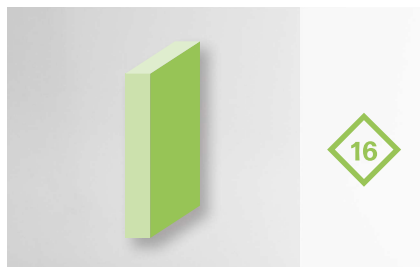

## Available Gauges

Regency work tables come in three different gauge types:

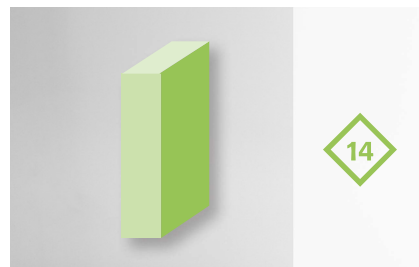

### 18 Gauge

These are economy commercial work tables. Being lighter and less expensive, they are used for salad preparation, sorting items, and general working space.

### 16 Gauge

These are standard-duty commercial work tables that are ideal for the foodservice industry. They offer quality and affordability and are very durable.

### 14 Gauge

Heavy commercial work tables are made from premium 14 gauge, type 304 stainless steel which is resistant to corrosion. This heavy-duty stainless steel work table is suitable for butcher shop applications as it can withstand heavy blows without denting.
