

Product Care

Compression Molded Items

(Includes Fiberglass Camtrays®, Fiberglass Plate Covers)

- All fiberglass products need to be washed thoroughly before their initial use.
- All fiberglass items are commercial dishwasher safe. Occasionally, these products need to be washed by hand with warm water and soap to prevent build-up. This would depend on the frequency with which the items are used.
- Use a plastic or bristle brush when hand washing.
- Do not use abrasives (such as Comet, Ajax, etc., or metal scouring pads).
- Rinse thoroughly with clean water and let dry.
- Camtreads® that are stained can be cleaned with a product such as “Lime Away” but be sure to rinse well after cleaning and let dry
