

Granite Tabletop Cleaning & Maintenance

* All granite tabletops are sealed at factory. Granite sealant does not prevent staining, but only slows the staining process.

WARRANTY DOES NOT COVER STAINING.

Daily Up-Keep

- **DO NOT** use abrasive or acidic cleaners, or cleaners containing lemon, lime, vinegar, ammonia, or bleach.
- Use warm water mixed with a mild dish soap for daily cleaning. If sanitizer is required, use 50/50 warm water 91% isopropyl alcohol. Be sure to dry to prevent streaking.
- Wipe up spills as soon as possible.
- Outsides of containers and bottles should be kept clean to not leave residue on tables, which could result in staining.

Maintenance

- Re-seal every 3-4 months, depending on traffic and installation location.
- A spray on and wipe off stone sealant can be purchased at any hardware store.
