

FRYMATE^{LLC}

DEEP FRYER FILTERS

HOW TO MEASURE FOR A FRYMATE FILTER

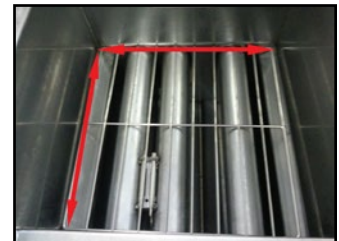

Step 1: Fryer tank must be empty.

Step 2: Measure the length and width at the bottom of the tank. Let the tape measure rest on the heating element, if applicable (some fryers have angled sides, so measure at the point where the grate fits).

Please refer to the list of compatible models on the product page, to confirm selection of the appropriate filter for your fryer(s).

Please note: measuring accurately is important, as over time, the tank can become warped (heat expands metal).
