

DIRECTIONS FOR USE

Please reference compatibility charts present on www.webstaurantstore.com or www.therestaurantstore.com to ensure you are using the correct light bulb or glue trap for your unit.

Before replacing your current, old light bulb, please turn off the compatible insect light trap or insect zapper and unplug the unit. Proceed to open the unit up in accordance to your models instructions and unscrew the current light bulb, being careful to not twist so hard as to break the bulb. Gently remove the bulb and safely dispose of it in accordance to your applicable laws. Then, install the new light bulb again being careful to not screw so hard as to break the bulb. Once the bulb is securely in place and the unit closed from being opened up and thusly being fully assembled again, you may plug the unit back in and turn it back on so as to return the unit to full functionality.

Please note, depending on the unit, the bulb may not turn back on right away if an efficiency feature is present. For example, a unit with a dusk/dawn feature should only return to being fully on in the presence of darkness.
