

## How To Use

To use, simply spread Victor® Rat-A-Way™ in 1- to 3-inch bands surrounding the areas you're trying to protect, such as around the perimeter of your house, barn, woodpile, trashcans, and more. To make your repellent efforts even more effective, increase the width of the band. Reapply Rat-A-Way™ once the scent has become faint or the pellets begin to degrade – approximately every 2 to 3 weeks. You may need to reapply sooner if you are experiencing excessive rain. The 3 lb bag can cover up to 175 linear feet to offer plenty of repelling power around your property.
