

How to Set the Deadset™ Mole Trap

The Victor® Deadset™ Mole Trap is incredibly easy to use. Simply follow these six easy steps to get started.

1. Prior to treatment, determine which tunnels are active by poking a 1" hole in the raised earth into the tunnel. If the hole is resealed in 24 hours, the tunnel is active.
2. After identifying active burrows, water the active area thoroughly.
3. Press down on the raised earth with your foot to collapse the roof.
4. Then, press the trap into the softened ground. Use the foot pegs to set the trap firmly in place.
5. Raise and lower the handle until the spears move freely through the ground.
6. With feet on the foot pegs, raise the handle to set the trap.
