

FROZEN Beverage Dispensers

Top Features

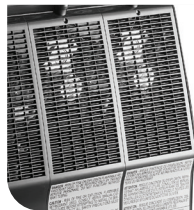

Hinged Lids

When it's time to craft your frozen beverages, the liquid mixture can be poured directly into the bowls without removing the lids. Thanks to the hinged design and having no electrical parts in the lid, you can simply lift, pour, then set the lid back in place. This also helps to create a more sanitary cleaning process as users won't have to remove the lid completely and set it on potentially dirty surfaces like with other machines.

Alcohol

Great for restaurants and bars that want to serve alcoholic slushies. Most machines like this recommend that you shouldn't use alcohol in them, but this machine is perfectly fine with alcohol. The BRIX measurement must be adjusted though (as with any mix that goes into the machine) – this can be checked with a refractometer.

Rear Ventilation

"Space Saving Design" - For ultimate versatility, this beverage dispenser fits perfectly on any countertop. Because it is designed with vertical air flow, it does not require any clearance space, so it can be installed next to other equipment without hesitation.

Defrost Setting

Quick Defrost mode lets the machine defrost 75% faster than other machines. This defrost mode is patented. This is a hot gas defrost - most machines have a defrost system, but it is usually just a standby mode where the product will melt. Ours is different in that it is a hot defrost.

Additional Features

Quick Access to Product Literature – For ease of use, a scannable QR code is located behind the drip tray. This allows users to access relevant manuals, spec sheets, videos, and more online.

Handles – This unit features large handles for effortless operation. The handles have a push/pull design and can be used either way to control the amount of product dispensed. Plus, an attachment is included for ADA compliance. The handles can be removed for cleaning.

Easy Cleaning – With the dispenser needing to be cleaned daily, disassembly has never been easier! For ultimate convenience, this machine only has *four parts* that need to be cleaned. The bowl and its reduced number of components can be easily removed without tools, ensuring hassle-free cleaning. Lights behind the bowls can be easily removed for cleaning.

Language Users can choose between five different language settings: English, Italian, Spanish, French, and German.

Programmable Standby Mode The temperature of each bowl is easily monitored to maintain ideal consistency thanks to the unit's automatic mode. It automatically switches the machine into "standby" mode overnight and will refreeze the ingredients just before your business opens for the day.

Excellent Visibility – The 3.2 gallon bowls promote excellent product visibility, allowing your colorful drinks to speak for themselves and boost impulse sales! Lights sit behind the bowls to showcase your product in an elevated way. This increases visibility in dimly lit establishments.

Drainage Tube – Located on the bottom of the machine, there are two drainage tubes that empty into the drip trays. These tubes will release any mix or liquid that has gotten into the machine right into the drip trays. This helps with cleaning and keeping the machine less likely to have internal issues.

Versatile Use – The machine can be used indoors or outdoors up to 109 degrees Fahrenheit, allowing you to place it wherever it's needed the most.
