

# Dipper Well Installation Kit

## Assembly Instructions

### Dipper Well

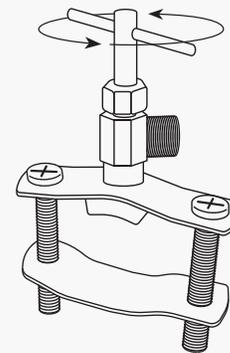

#### INSTALLATION KIT INCLUDES:

- (1) Self-piercing saddle valve assembly
- (1) Tailpiece assembly
- (1) 25' water hose

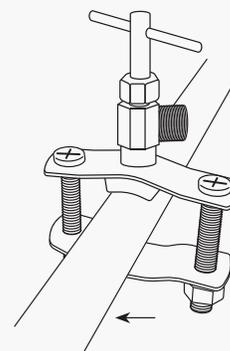

### Assembly Instructions

1. After you have opened your dipper well installation kit and located the pipe you want to use to supply your dipper well, turn the top handle counterclockwise until it stops (Fig. 1).
2. Install the dipper well onto the supply pipe you have chosen and tighten the hex nuts and clamp plates to the pipe (Fig. 2).

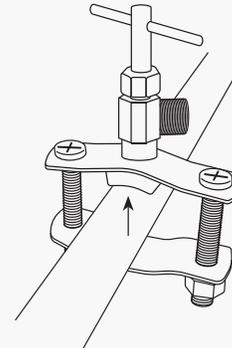

(Fig. 1)

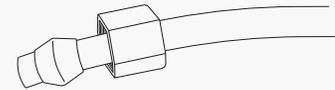

(Fig. 2)

## Assembly Instructions (continued)

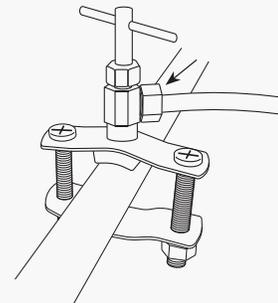

3. Ensure rubber seal is compressed to avoid leakage (Fig. 3).
4. Install the compression nut and ferrule onto the flexible hose from the installation kit (Fig. 4). The compression nut should be installed onto the threads of the tapping fitting.
5. Install the other end of the flexible hose onto the dipper well. (Fig. 5)
6. Turn the top handle clockwise and ensure a hole is punctured in the supply pipe.
7. Turn the top handle of the faucet counterclockwise to allow water to flow to the dipper well. Check all connections for water leaks and tighten as needed (Fig. 6).
