

Introducing the new
Ultra Safe Technology
Tank Brush

Raising the standard
for security, safety,
hygiene, and efficacy

The UST Tank Brush provides unmatched
bristle security combined with an
exceptionally hygienic, easy-to-clean
design—solving a challenge many
thought insurmountable.

Security

- ✓ **Exceptional bristle retention:** Individually molded bristles minimize bristle loss and reduce the risk of foreign body contamination. Unlike traditional drilled and stapled brushes, losing one bristle doesn't compromise the security of the others.
- ✓ **Optimized brush lifespan:** Brushes last longer because of durable construction, top-of-the-line materials, and individually molded bristle security units.

Safety

- ✓ **Food contact compliant:** Made from EU and FDA food contact compliant materials, the tank brush has been tested and proven to meet the highest food safety standards.
- ✓ **Exhaustive documentation:** All UST and Vikan Hygiene range tools come with complete documentation of regulatory compliance, making regulatory and governmental body conformity clearer.

Hygiene

- ✓ **Hygienic design:** The fully molded construction minimizes nooks and crannies where contamination can hide, optimizing hygiene by reducing potential harborage points.
- ✓ **Color-coded versatility:** Compatible with all Vikan handles and available in 8 colors, the tank brush supports effective color-coded zoning plans.

Efficacy

- ✓ **Lightweight and ergonomic:** Designed for ease of use, the lightweight construction reduces operator strain during extended tasks.
- ✓ **Cleaning performance:** The flared bristle pattern and a rounded head shape effectively clean the rounded edges of tanks and vessels, while stiff bristles tackle heavy soils with ease.
