CHEMTREC 800-424-9300

SECTION 1: PRODUCT AND COMPANY IDENTIFICATION

Title:

24 Hour Emergency Phone:

Vertical Manufacturing, LLC 7995 E Prentice Ave #207E

Greenwood Village, CO 80111

Product Name: Lead/Acid Battery, Wet, Filled with Acid

SECTION 2: COMPOSITION INFORMATION/INGREDIENTS

SECTION 3: HAZARDS IDENTIFICATION

NOTE: Under normal conditions or battery use, internal components will not present a health hazard. The following information is provided for battery electrolyte (sulfuric acid, 35%) and lead for exposure that may occur during battery production or container breakage or under extreme heat conditions, such as fire.

Emergency Overview:	Acid filled battery. Contact with the electrolyte will cause burns to the eyes and skin. Contains lead. Absorption of lead potentially may cause poisoning and reproductive effects.			
ROUTES OF ENTRY	EYE CONTACT:	Contact with the battery electrolyte can cause severe irritation, burns, and cornea damage upon contact.		
	SKIN CONTACT:	Battery electrolyte (sulfuric acid, 35%) can cause severe irritation, burns and ulceration.		
	SKIN ABSORPTION:	Not a significant route of entry.		
	INHALATION:	Acid mist generated during battery charging or spillage of the electrolyte in a confined area may cause respiratory irritation.		
	INGESTION:	Hands contaminated by contact with internal components of a battery can cause ingestion of lead/lead compounds. Ingestion of battery electrolyte will cause severe burns to mouth and gastrointestinal tract.		
ACUTE HEALTH EFFECTS:	Acute effects of overexposure to lead compounds are gastrointestinal (GI) upset, loss of appetite, diarrhea, constipation with cramping, difficulty in sleeping and fatigue. Exposure and/or contact with battery electrolyte (sulfuric acid, 35%) may lead to acute irritation of the skin, corneal damage of the eyes, and irritation of the mucous membranes of the eyes and upper respiratory systems, including lungs.			
CHRONIC HEALTH EFFECTS:	Lead and it's compounds may cause chronic anemia, damage to the kidneys and nervous system. Lead may also cause reproductive system damage and can affect developing fetuses in pregnant women. Battery electrolyte (sulfuric acid, 35%) may lead to scarring of the cornea and chronic bronchitis.			
MEDICAL CONDITIONS	Inorganic lead and it's compou	nds can aggravate chronic forms of kidney, liver, and nuerological diseases. Contact of battery		
AGGRAVATED BY EXPOSURE:	electrolyte (sulfuric acid, 35%)	with the skin may aggravate skin diseases such as eczema and contact dermatitis.		

SECTION 4: FIRST AID MEASURES

EYE CONTACT:	Immediate rinse with cool running water for at least 15 minuts. Seek medical attention immediately after rinsing.
SKIN CONTACT:	Wash throughly with soap and water. If acid is splashed on clothing, remove and discard. If acid is splashed in shoes, remove them immediately and discard Acid cannot be removed from leather.
INHALATION:	Remove from exposure and consult a physician if any of the acute effects listed above develop.
INGESTION:	Lead: Consult a physician. Battery Electrolyte: Do not induce vomitting. Refer to a physician immediately.

S

ECTION 5: FIRE FIGHTING N	IEASURES				
FLASH POINT:	For Hydorgen = N/A	TEST METHOD:	N/A		
AUTOIGNITION TEMPERATURE:	Hydrogen = 580°C	FLAMMABLE LIMITS:	For Hydrogen:	LEL = 4.1	UEL = 74.2
EXTINGUISHING MEDIA:	Dry Chemical, Foam or CO2 SPECIAL FIRE FIGHTING Use positive pressure, self containe PROCEDURES: apparatus.		ained breathing		
UNUSUAL FIRE AND EXPLOSION HAZARD:	Hydrogen and oxygen gases are produced in the supports combustion. These gases enter the air and other sources of ignition away from the batt	cells during normal battery c through vent ports. To avoid ery.	pperations, hydroge I the chance of a fir	n is flammable e or explosion,	e and oxygen keep sparks

SECTION 6: ACCIDENTAL RELEASE MEASURES

Remove combustible materials and all sources of ignition. Contain spill using sodium bicardonate (soda ash, baking soda) or calcium oxide (quicklime). Cover spill with either material. Make certain the mixture is neutral, and then collect residue and place in a drum or other suitable container. Dispose of as a hazardous waste. Wear acid-resistant boots, chemical face shield, chemical splash goggles, and acid-resistant gloves.

SECTION 7: HANDLING AND S	TORAGE				
WORK PRACTICES:	Place a minimum of two layers of corrugate than three layers high. Use a battery carrie contact with internal components of the ba batteries.	ed cardboard between layers of ba er to lift batteries or place hands at atteries. Wash hands thoroughly b	tteries. When stacking in a trailer, stack no more opposite corners to avoid spilling of acid. Avoid efore eating, drinking or smoking after handling		
SPECIAL PRECAUTIONS:	Keep open flames and sparks away from ch	arging batteries.			
STORAGE:	Store lead acid batteries with adequate ventilation. Room ventilation is required for batteries utilized for standby power generation. Never recharge batteries in an unventilated, enclosed space.				
SECTION 8: EXPOSURE CONTR	ROLS/PERSONAL PROTECTION				
VENTILATION:	Store lead acid batteries with adequate ver generation or in area designated for batter	ntilation. Room ventilation is requ y charging	ired for batteries utilized for standby power		
RESPIRATORY PROTECTION:	None required under normal handling cond generated, which may cause respiratory irr mist.	litions. During battery formation (itation. If irritation occurs, wear a	high-rate charge condition), acid mist can be respirator suitable for protection against acid		
GLOVES:	Vinyl-coated, PVC, gauntlet-type gloves wit	h rough finish.			
EYE PROTECTION:	Chemical splash goggles are preferred. Als shields.	o acceptable are chemical face shi	elds worn over safety glasses with solid side		
OTHER PROTECTIVE EQUIPMENT:	Safety shoes worn with rubber or neoprene over boots to keep acid out of boots.	e boots or steel-toed rubber or neo	oprene boots worn over socks. Place pants legs		
SECTION 9: PHYSICAL and CH	EMICAL PROPERTIES				
PHYSICAL STATE:	Battery is solid case with solid and liquid in	ternal components.			
APPEARANCE AND ODOR:	Battery Electrolyte (acid) is a clear to cloud solid with slight acidic odor.	y liquid with slight acidic odor. Aci	d saturated lead oxide is a dark reddish-brown		
pH:	electrolyte - 1.0	SPECIFIC GRAVITY:	electrolyte - 1.200 -1.300		

pH:	electrolyte - 1.0	SPECIFIC GRAVITY:	electrolyte - 1.200 - 1.30
BOILING POINT:	Lead - 1755°C, electrolyte - 110-112°C	VAPOR PRESSURE:	electrolyte - 11.7
MELTING POINT:	Lead - 327°C	VAPOR DENSITY:	electrolyte - 3.4
SOLUBILITY IN WATER:	electrolyte - 100%	PERCENT VOLATILE:	Not determined
COEFFICIENT WATER/OIL:	N/A	EVAPORATION RATE:	Not determined

SECTION 10: STABILITY and REACTIVITY

Title:

SECTION 10: STABILITY and RI	ACTIVITY				
STABILITY:		Unstable	\square	Stable	
CONDITIONS TO AVOID:	Sparks and other sources of ignition may ignite hydrogen gas.				
INCOMPATIBILITY:	Lead/lead compounds: Potassium, carbides, sulfides, peroxides, phosphorus, sulfur. Battery electrolyte (acid): Combustible materials, strong reducing agents, most metals, carbides, organic materials, chlorates, nitrates, picrates, and fulminates.				
HAZARDOUS DECOMPOSITION PRODUCTS:	Lead/lead con	Lead/lead compounds: Oxides of lead and sulfur. Battery electrolyte (acid): Hydrogen, sulfur dioxide, sulfur trioxide.			
HAZARDOUS POLYMERIZATION:	Will not occur	` .			
CONDITIONS TO AVOID:	High temperature. Battery electrolyte (acid) will react with water to produce heat. Can react with oxidizing or reducing agents.				
SECTION 11: TOXICOLOGICAL	INFORMATION	1			
	Lead/lead con	npounds: No data	is available.		
ACUTE TOXICITY DATA:	Sulfuric Acid:	LD50 oral rat: 214	10 mg/kg, LDS	50 inhalation: 510 mg/m ³ /2 hour	
CARCINOGENICITY:	The National T inorganic acid ACGIH has cla These classific acid mist (sulf may result in t	Foxicological Programist containing su mist containing su ssified "strong inor cations do not apple furic acid mist) is no the generation of s	am (NTP) and Ilfuric acid" a rganic acid m y to liquid for ot generated sulfuric acid n	d the International Agency for Research on Cancer (IARC) have classified "strong s a Category 1 carcinogen, a substance that is carcinogenic to humans. The ist containing sulfuric acid" as an A2 carcinogen (suspected human carcinogen). rms of sulfuric acid or sulfuric acid solutions contained within a battery. Inorganic under normal use of this product. Misuse of the product, such as overcharging, hist.	
	The NTP and I experimental levels of expos Indices.	ARC have classified animals at relative sure. For further in	d lead as an A ly high doses nformation, s	A3 carcinogen (animal carcinogen). While the agent is carcinogenic in , the agent is unlikely to cause cancer in humans except under uncommonly high ee the ACGIH's pamphlet, <i>1996 Threshold Limit Values and Biological Exposure</i>	
REPRODUCTIVE TOXICITY:	Lead is known	ı to cause birth def	ects in huma	ns and animals	
TERATOGENICITY:	Lead is known	ı to cause birth def	ects in huma	ns and animals	
MUTAGENICITY:	Lead has been	1 found to be muta	genic.		
SYNERGISITC EFFECTS:	Other heavy n	netals (arsenic, cad	lmium, merc	ury) may cause additive toxic effects.	
SECTION 12: ECOLOGICAL INF	ORMATION				
EFFECTS OF MATERIALS ON PLANTS OR ANIMALS:	Lead and it's c	components may c	ause an adve	rse effect to animals and plants that come into contact with them.	
EFFECTS OF MATERIALS ON AQUATIC LIFE:	Lead and it's c contact with t	components may ca hem.	ause an adve	rse effect to animals and plants in an aquatic environment that come into	
SECTION 13: DISPOSAL					
BATTERY ELECTROLYTE (ACID):	Neutralize as a	above for a spill, cc	ollect residue	, and place in a drum or suitable container. Dispose of as a hazardous waste.	
	DO N	OT FLUSH LE	AD-CONT	AMINATED ACID INTO SEWER!	
BATTERIES:	Send to a lead	l smelter for reclan	nation follow	ing applicable laws and regulations.	

SECTION 14: TRANSPORTATION INFORMATION

US DOT SHIPPING NAME:	UN 2794, Batteries, Wet, Filled with acid, Class 8, PG, III
DOT LABEL:	Corrosive 8
IATA SHIPPING NAME:	UN 2794, Batteries, Wet, Filled with acid, Class 8, PG, III
IATA LABEL:	Corrosive 8
SECTION 15: REGULATORY INI	FORMATION
TSCA REGISTRY:	Ingredients listed in the TSCA Registry are lead, lead oxide, lead sulfate and sulfuric acid.
CALIFORNIA PROPOSITION 65 WARNING:	The state of California has listed lead as a material known to cause cancer or cause reproductive harm (July 9, 2004 California List of Chemicals Known to Cause Cancer or Reproductive Toxicity).
SARA TITLE III:	The contents of this product are toxic chemicals that are subject to the reporting requirements of section 302 and 313 of the Emergency Planning and Community Right-To-Know Act of 1986 (40CFR 355 and 372).

SECTION 16: OTHER INFORMATION

Disclaimer: This information has been compiled from sources considered to be dependable and is, to the best of our knowledge and belief, accurate and reliable as of the date compiled. However, no representation, warranty (either express or implied) or guarantee is made to the accuracy, reliability or completeness of the information contained herein. This information relates to the specific material designated and may not be valid for such material used in combination with any other materials or in any process. It is the user's responsibility to satisfy himself as to the suitability and completeness of this information for his own particular use. We do not accept liability for any loss or damage that may occur, whether direct, indirect, incidental or consequential, from use of this information.
