## Notes & Details

Serve warm and delicious food with this Acopa wrought iron pillar electric chafer with stainless steel cover and plastic handle. This chafer has a durable iron construction that is dependable and built to last. It also has two sturdy side handles for easy transportation. This electric chafer eliminates the expense of chafer fuel cartridges, and any hazards that are a byproduct of an open flame. This electric chafer is great for outdoor events as it is easier to use than chafing fuel in the event of windy or inclement weather. Just remember you will need access to an electrical outlet.

As opposed to traditional chafers with fuel trays, this chafer allows you to have more control over the temperature. This makes this chafer great for any event as it takes away the guessing game of using fuel and ensures your guests are always receiving food that is the perfect temperature. By purchasing this chafer, you have the benefit of getting everything you need in one simple set.

This chafer has a 900W water pan and chafer cover to prevent your food from drying out. The food pan is 2" deep, which gives you plenty of room for filling it with your most delicious offerings. The stainless steel chafer cover keeps things sanitary by minimizing food exposure, traps in heat when food is not being served, and it also enhances the appearance of this chafer. With an ample capacity, this chafer is ideal for serving a variety of appetizers, entrees, or side dishes and it's just what you need for your hotel, restaurant or catering operation. This unit requires a 120V connection for operation.
