Notes & Details

Bring convenience, safety, and portability to your food service with the help of this Avantco IC35DB stainless steel double countertop induction range / cooker. This compact, lightweight unit is an ideal choice for front of the house cooking demonstrations or sampling. Perfect for medium-duty use in omelet stations or pasta stations, catering services, display cooking, or anywhere you need an extra burner, this induction range provides a level of safety that surpasses traditional burners. The surface of the range only heats the bottom of induction-ready cookware and does not retain heat, making it safer for use around guests. The heat energy absorbs immediately into the cookware, allowing you to cook food quickly and efficiently. When you remove the cookware, the burners enter standby mode and will not create a hot surface. Using this countertop range is easy and user-friendly thanks to two heat adjustment modes. You can choose between adjusting the power level of the burners from 1 to 9, or delicately adjust each burner's temperature to find the perfect heat between 140 and 460 degrees Fahrenheit.

Each burner packs 1800W of power so you can boil water on one burner and cook protein or sauce on the other with ease. This range includes a timer for easy, controlled cooking that reaches up to 180 minutes measured in 5-minute increments. The unit's 9 power levels ensure you can use it for everything, from simmering sauces to searing steaks. Its durable stainless steel body ensures its durability to withstand consistent use at events and special occasions, while its flameless heat provides fast, efficient cooking and reduces the risk of injuries. It accommodates pots between 4 3/4" and 10 1/4" in diameter and requires a 240V electrical connection for operation.
