- Requires a liquid CO2 tank with siphon tube (sold separately)

Certifications

Technical Data

Plug Type	NEMA 1-15P
Power Type	Electric
Refrigerant Type	CO2
Type	Chillers

Notes & Details

Easily chill and frost your glasses with this Avantco Ice countertop mount glass froster / chiller. This glass froster is the perfect way to cool your cocktail glass instantly for quick service or put a delicate layer of frost on your craft beer glasses. By frosting beer glasses, you can keep your craft beers cool and fresh tasting! A frosted glass doesn't taint or alter the flavor of drinks or water down beverages like ice.

This glass froster chills glass in just 6 seconds, perfect to instantly chill glass in bars and restaurants for your guests. To chill glass, simply hold the glass over the top of the unit, which dispenses the CO2. This unit requires a liquid CO2 tank with siphon tube (sold separately) to operate. We recommend using a 20 lb. CO2 tank or larger for optimal results. To add a flare of style to your service station, this glass chiller flashes red / blue LED lights on the glass while frosting.

This glass chiller is durable with its aluminum construction and stainless steel hood. Thanks to its four plastic feet, this glass chiller stays stable on your countertop during use. This unit requires a 110V electrical connection for operation.
