Notes & Details

Whether you want to show off your wide selection of sodas, teas, and energy drinks, or give customers quick access to pre-packaged salads and sandwiches, this merchandising refrigerator is the perfect unit for the task with its sharp looks and smart design features! Its single section design takes up minimal space and makes this unit great for use in applications like markets, delis, and restaurants where it can be kept in plain sight to house take-out beverages or give customers a chance to see all of the delicious desserts, sides, and drinks you offer with your meals! This merchandiser boasts interior LED lighting on the right side to always show your products at their best. The anti-fogging, dual-pane tempered glass door helps ensure a crystal-clear view of the interior, while integrated magnetic gaskets ensure the left-hinged door closes firmly after use every time, saving energy and maintaining the quality of your food. The unit is ideal for bottled and canned beverages and it can also be used to show off salads, sandwiches, and other pre-packaged foods.

Made from plastic-coated steel, the shelves in this refrigerator are easy to install and adjust to meet the demands of changing inventory needs. Each shelf has a 90 lb. load capacity. A 1/3 hp refrigeration system is located on the bottom, which draws air from the coolest part of the room for better efficiency while also increasing the height of the bottom shelf to make loading and unloading easier. An intuitive control makes it easy to adjust the temperature as needed, and it also comes with a separate switch for the lighting. A digital display on the exterior allows you to see the temperature inside.

The unit's narrow design is ideal for compact spaces, while adjustable leveling feet allow you to position it appropriately. Because it is narrow, the merchandiser is not compatible with casters to prevent it from falling over, thus ensuring safe installation and operation.

This model uses R-290 refrigerant which has an ozone depletion potential (ODP) of 0 and a global warming potential (GWP) of 3. Your drinks and foods will draw customers in on their own, but to help the merchandiser and your refrigerated goods stand out and be noticed, this model comes with a lighted panel above the cabinet. It will improve your unit's visibility no matter where you choose to install it! The frame on this unit is made from black, painted steel, and foamed-in-place polyurethane insulation within improves temperature retention and helps your merchandiser to work more efficiently. This item requires a 115V electrical connection for operation.
