

The Glass

TITANIUM Reinforced®

This process provides a permanent anti-abrasion treatment to the glass's stem. Developed by the company's R&D department, titanium reinforcement utilizes nanotechnologies directly on the glass. It thereby permanently increases the **stem's resistance to breakage by 140%**. Being the first in the world, holding patent number EP20100153150, there is simply no equal in the marketplace. It additionally **helps maintain** sparkle and transparency, and also **prevents wear** and **discoloration from washing cycles**.
