## Technical Data

Color	Red
Door Material	Tempered Glass
Features	Heated Warming Deck Removable Crumb Tray
Frame Material	Stainless Steel
Kettle Material	Aluminum
Kettle Size	12 Ounces
Kettle Volume	Medium
Oil Dispensing	Manual / Pour In
Panel Material	Plastic
Plug Type	NEMA 5-20P
Power Type	Electric
Style	Counter
Type	Single Kettle Poppers

## Notes & Details

For a commercial popcorn popper that can quickly produce bucket after bucket of fresh, buttery popcorn for hungry customers, look to the PM50NR Royalty Series 12 oz. commercial red popcorn popper! Boasting 1800W of power and easy-to-use 3-toggle controls, this machine will keep hot popcorn flowing as quickly as your customers can eat it up!

This high-powered machine has a 12 oz. non-stick aluminum kettle that only needs a few minutes to warm up, an ideal feature for medium- to high-volume businesses. The bigger kettle means there is less time needed to prepare another kettle and more time for interacting with customers. It also allows for 60% more servings per kettle than the smaller 8 oz. model, with the cabinet holding up to 115 oz. of popcorn. Once this Carnival King unit is cooking, the hot, drop-down kettle dumps the finished popcorn onto to the popper's warm deck, where it's kept fresh until you're ready to serve. The included scoop and measuring cup set help ensure consistent portion sizes every time. This unit will catch the eye of passing customers with its colorful frame, decals, and light, which brightly illuminates the finished popcorn for excellent merchandising.

Cleanup is just as simple as the popping process because this kettle is removable for easy cleaning and maintenance. The dual front doors, back, and side see-through clear panels that make up the viewing area are all made of tempered glass. The frame, removable crumb tray, exterior of the kettle, and interior top / bottom of the cabinet are made stainless steel for impressive, cost-effective durability.

A safety circuit breaker is also included to prevent motor burnout. The extra power allows for quicker recovery and quicker heating of the kettle. It comes standard with rubber feet to prevent scuff marks and provide stability. This popper requires a 120V electrical connection.
