IMPORTANT! INSTALLER PLEASE NOTE :

This water cooler has been designed and built to provide water to the user which has not been altered by materials in the cooler waterways. The grounding of electrical equipment such as telephone, computer, etc. to water lines is a common procedure. The grounding may be in the building but may also occur away from the building. This grounding can cause electrical feedback into a water cooler creating an electrolysis which creates a metallic taste or causes an increase in the metal content of the water. This condition is avoidable by installing the cooler using the proper materials as shown

Pushing tube in before pulling it out helps to NOTICE This water cooler must be connected to the water supply using a dielectric coupling. The release tube 1/4" O.D. tube cooler is furnished with a non-metallic strainer which meets this requirement. The drain trap which is provided by the installer should also be plastic to completely isolate the cooler 3/8" O.D. Tube connect **Building water** water inlet to cold water supply from the building plumbing system. Bottle filler unit on bracket attached to wall by 6 holes (as shown). Water and electrical inlet cooler will connect through pre-punched hole in basin. ㅁ These products are designed to operate on 20 psi to 105 psi supply line pressure.
