Notes & Details

The Garde XL MCJ2 manual commercial citrus juicer with safety spring upgrades the traditional design of a manual juicer to maximize user safety. It features a safety spring that holds the handle in the upright position, preventing it from dropping and slamming onto the user's fingers. This not only eliminates the pain of the injury, it also ensures that staff are available for their hours and motivated by a positive and safe work environment. The handle is even rubberized for a secure grip and user comfort.

For easy, ergonomic operation, the juicer includes a 3-pinion lever to provide ample leverage. This allows the user to quickly juice oranges, limes, and other citrus fruit without putting undue strain on their body. Plus, because the unit features suction cup feet, it won't slip around during use; it will remain safely in place.

This juicer, designed for commercial applications, is made with a heavy-duty cast iron frame. It also provides space below the funnel to place a cup (sold separately) for juice collection. Whether using the juice for freshly-squeezed lemonade, an orange smoothie bowl, or your signature key lime pie, this citrus juicer provides an easy- and safe-to-use option for operations that prefer the simplicity or price of a manual model.
