## PROCESS:

1. Place the stainless steel sheet on a flat surface and position the first chosen frame.
2. Fill the first frame placed on the special sheet with the chosen filling.
3. Smooth with ruler as product cools to a hardened base.
4. Then place the second frame on the first, use another filling and smooth.
5. Proceed in the same way for the third filling. Freeze the whole set with the sheet if required.
6. Turn out by removing the frames one by one (do not heat with a torch but use a blow air gun instead).
7. Layers of biscuits can also be inserted between the fillings.
