Notes & Details

Speed up order efficiency with this Regency 24" x 72" expeditor table kit! Having a dedicated expediting station that you can wheel to different areas is a great way to boost efficiency and adapt to changing needs in your restaurant, but designing, sizing, researching, and ordering all of the components needed to make one takes valuable time and work. With this pre-sized kit, you can order everything you need to get a new expediting table set up and working in no time with minimal effort and stress!

A ServIt 60", 1550W strip warmer provides the power needed to keep finished orders at safe holding temperature while they wait to go out to hungry customers. This strip warmer features a heavy-duty stainless steel housing and built-in toggle controls to make operation as simple as flipping a switch, while the metal-sheathed calrod element and aluminum reflector work to provide precise heat that keeps food hot and other surfaces cool. The included power cord and NEMA 5-15 plug works with any standard 3-prong wall outlet, so you won't need to call the electrician, either.

A Regency stainless steel work table serves as the base for this station. Featuring a 24" x 72" table top made from 16-gauge stainless steel and a set of 1 5/8" stainless steel legs, it can support approximately 600 lb. Above the work table, a 12" deep stainless steel single deck overshelf provides a convenient place to mount your strip warmer, while also giving a bit of overhead storage for garnishes, hand tools, plates, and other commonly-used items. Below the work table, two 18-gauge adjustable work table undershelves provide space to store anything else your station requires. The overshelf can support approximately 420 lb. while each undershelf can hold 380 lb.

The undershelves and overshelf use type 430 stainless steel. Type 304 stainless steel is used on the work table, which provides extra durability where it's needed most, while giving extra protection against rust and corrosion. The kit comes unassembled, but is easy to put together thanks to the simple and intuitive set screw installation. And to make your table mobile, it comes with a set of 5" casters (2 with brakes). Hardware for mounting the overshelf to the table is sold separately.
