Features	Adjustable Legs Portable
Heating Source	Metal Sheathed / Calrod
Infrared	Without Infrared
Material	Stainless Steel
Plug Type	NEMA 5-15P
Power Type	Electric
Style	Single
Type	Strip Warmers
Usage	Medium Duty

Notes & Details

Keep your prepared foods hot and ready to serve with the ServIt SWI-30CPMC 30" strip warmer with infinite controls! Designed with the operator in mind, this strip warmer uses full length, durable metal sheathed calrod elements to provide 650 watts of heating power, hot enough to maintain peak serving temperatures but gentle enough to prevent drying or overcooking. It's perfect for use in your cafeteria, restaurant, banquet hall, buffet line, or anywhere that you need to keep prepared foods piping hot and fresh for your customers. The aluminum reflector is precision angled, directing heat to a precise target area to keep food hot and surfaces outside the zone cool. Despite the reflectors directing constant heat, they do not blacken to provide a consistent heat pattern at all times.

The warmer's heavy-duty stainless steel housing provides excellent durability and corrosion resistance, making it ideal for a busy kitchen environment. The sleek stainless steel construction is easy to clean at the end of a busy shift, keeping your back-of-house to front-of-house operation in perfect order all while maintaining a crisp appearance. Side-mounted infinite controls allow you to make adjustments to the temperature so that you can choose the level of heat that works best for the food you are serving. The infinite control provides unrivaled precision for any dish but eliminates cold spots with the aluminum reflector's pyramidal heat pattern. For your convenience, mounting brackets and a built-in cord and plug are included to make installation as easy as possible. The brackets must be used for proper spacing below an overself or other mounting method. Chains can be purchased separately to create a customizable distance between your strip warmer and serving surface.

Take ServIt on the go for mobile applications such as pop-up restaurants, kiosks, catering events and more with the included designer "C" style legs to provide you with the same hot holding capacity as a permanent mount strip warmer. These legs attach directly to your ServIt strip warmer in order to prop the warmer on a countertop or prep table for back-of-house operations, or on buffet-style tables at your concession stand or catered event. The "C" shape of the legs allows clearance all around the warmer, and the incredibly slim design takes up minimal counterspace while maintaining an elegant serving experience. The legs are constructed at a 16" fixed height for a consistent distance from food to warmer every time.

The attached rubber feet help to reduce movement and improve stability in the warmer, virtually eliminating accidental slips or tip-overs. The legs are easy to install on ServIt strip warmers using the pre-existing holes and included hardware set, which requires no retro-fitting. This unit includes a cord and plug and requires a 120V electrical connection for operation.
