Style	Single
Type	Strip Warmers
Usage	Medium Duty

Notes & Details

Keep your prepared foods hot and ready to serve with the ServIt SWT-18 18" strip warmer with toggle controls! This strip warmer uses durable metal sheathed calrod elements to provide 350 watts of heating power, hot enough to maintain peak serving temperatures but gentle enough to prevent drying or overcooking. It's perfect for use in your cafeteria, restaurant, banquet hall, buffet line, or anywhere that you need to keep prepared foods piping hot and fresh for your customers. The aluminum reflector is designed specifically with the operator in mind, directing heat to a precise area to keep food hot and surfaces outside the zone cool.

The warmer's heavy-duty stainless steel housing provides excellent durability and corrosion resistance, making it ideal for a busy kitchen environment. The sleek stainless steel construction is easy to clean at the end of a busy shift, keeping your back-of-house to front-of-house operation in perfect order. Side-mounted toggle controls are simple to operate and provide one level of heat, so you can be sure your staff does not overheat your foods. The attached toggle switch guard helps protect from accidental turn-offs, which could cause food to not be held at proper serving temperatures. For your convenience, mounting brackets are included to make installation as easy as possible. The brackets must be used for proper spacing below an overshelf or other mounting method. Chains can be purchased separately to create a customizable distance between your strip warmer and serving surface. This unit must be hardwired and requires a 120V electrical connection for operation.
