Everything You Need to Begin Shrink Wrapping

Kits include:

- I-Bar sealer (W-Series) with round cut wire and sealing length options: 14", 20", 26", 30"
- PVC shrink film: 12" x 500ft, 18" x 500ft, 24" x 500ft, 28" x 500ft
- Heat gun

Video Demo →

A complete shrink-wrapping system designed for professional packaging needs. Each system includes a 500-ft roll of 75-gauge centerfold PVC shrink film. The sturdy steel I-bar sealer features a film roller caddy, a film separator, and a heat gun holder that positions the gun for optimal cooling. A round wire element ensures a clean cut and seal for the shrink film. The kit also includes a standard heat gun to complete the setup.

Shrink-wrapping is perfect for packaging parts, repacking returns, and protecting items such as CDs, DVDs, books, and more. Create sealed, custom-sized shrink wrapping that enhance appearance while keeping products clean, dry, and tamper-proof.

Easy to Operate

1. Turn on the power source.
2. Set the timer to the lowest setting that can cleanly cut through the shrink film.
3. Ensure one layer of shrink film is positioned under the film separator and the other layer is over it. Pull the film onto the sealing surface and seal the starting edge of the roll. Pull enough film beyond the sealing bar to fit the item being packaged. Insert the item between the two layers of centerfold shrink film and press down the sealing bar. Once the cut and seal is complete, pull the item away. Rotate the product to seal the remaining unsealed edge. Press the sealing bar down and repeat the process.
4. Use a heat gun to apply hot air evenly, shrinking the film tightly around the item for a uniform finish.

SPECIFICATIONS	SEALER MODEL	SHRINK FILM
SWK-14-S3	14" - W-350I	12" X 500FT
SWK-20-S3	20" - W-500I	18" X 500FT
SWK-26-S3	26" - W-650I	24" X 500FT
SWK-30-S3	30" - W-750I	28" X 500FT
