Notes & Details

Seal ingredients for storage or pre-cooked portions of food for later use with this VacPak-It VMC10DPU chamber vacuum packaging machine with a 10 1/4" seal bar. This powerful chamber vacuum packaging machine quickly seals each bag in 6 seconds or less and completely vacuums out the air in 25 to 60 seconds. This not only ensures efficiency, but a reliable, secure seal after every use.

Controls are designed for ultra-simple use, with arrow buttons to increase or decrease the duration of the seal or vacuum process. The digital controls also have a bright, easy-to-read display to show the vacuum pressure. This makes the unit's performance and progress easy to monitor, as does the built-in pressure gauge. Since the lid is transparent, you can even watch the vacuum packaging process first-hand.

To deliver an easy-to-maintain product, the unit is equipped with a dry pump that eliminates the need for oil. As a result, it helps you save both time and money. It's tested for up to 200,000 cycles too, so you can be sure that the machine is a great, long-lasting investment for your business. The 304 series stainless steel body is an additional perk, as it won't corrode or rust from the accidental spill or leak. This particular model requires a 120V electrical connection for operation.
