Notes & Details

This Waterloo deck-mounted metering faucet is a great way to regulate water use in your facility! With its push-button handle, this faucet releases a measured amount of water before shutting off, which prevents waste and accidentally leaving the water running. Waterloo faucets provide the industry-leading quality you expect. With heavy chrome-plated brass faucet bodies, a cartridge engineered for durability, and certifications from a wide range of national and local regulatory agencies, you can install this model with confidence. And to give you total peace of mind, it comes with a 3-year replacement warranty.

This faucet comes standard with a pre-set water run time of 8-seconds, but is easily adjustable. Turn the stem left to shorten the amount of time the valve stays open, or turn the stem right to lengthen it. Once you set the desired run time, place the cap back on the stem, tighten the set screw, then replace the temperature indicator button. This faucet features a 4" spout, while a 2 GPM aerator provides a consistent flow rate and minimal splashing. It boasts a single 1/2" NPS inlet, and the deck-mounted design is easy to install. This model also features a push-button metering cartridge to regulate the water flow.
